CAD/CAM MILLED TITANIUM BARS FOR IMPLANTS

Profitability
Productivity
Predictability
Precision Fit
APPLICATIONS

- **Detachable Prosthesis Bars:**
  - Dolder®
  - Milled
  - Hader®
  - Round
  - “Paris”

- **Fixed Prosthesis Bars/Hybrids:**
  - Wrap-around
  - Montreal with or without metallic lingual

- **KAL System:** Available for all bar types

- **Available Attachments:**
  - Gold rider
  - Titanium rider
  - 2.25 ball attachment with gold retention cap
  - 2.25 ball attachment with plastic retention cap
  - Locator
  - Nylon clip with metal sleeve

**Titanium Alloy Composition**

TITANIUM 6AL-4V:
- Titanium ........ 90%
- Aluminum ........ .6%
- Vanadium ........ .4%

**Fewer Patient Visits**

**Enhanced Productivity**

**Increased Profitability**

**Versatility of Attachments**

**Passive Fit**

**15-Year Patient Guarantee**

**Easy Chairside Adjustment**

Powered by BioCad
As the only dental laboratory network that provides innovative full practice growth support to dentists who want to excel above the status quo, DTI purposely seeks out the types of relationships that will best benefit both our laboratory—but more importantly—your practice.

With that in mind, DTI now offers a custom, digitally created and milled titanium bar for implant overdenture cases using CAD/CAM technology from BioCad. Through this investment, DTI is able to combine the most precise, predictable fit yet with the proven technical knowledge necessary to make each and every case a successful extension of your dentistry.

The custom milled titanium bars provide unsurpassed quality and are made entirely of surgical grade titanium. As a result of the CAD/CAM process, you will notice the absence of common defects such as welding seams and porosity. The one-piece titanium bars are lightweight – four times lighter than gold – which eliminates any worries about fluctuating gold material costs.

Overdentures do not need to be problematic. Your DTI laboratory will utilize precise points of data, scanned directly from your patient’s model, to mill your choice of lightweight, titanium bar that is designed expressly to your specifications. This unsurpassed level of precision will allow for a passive fit with virtually no tension on the implants.

The long-term performance of DTI’s CAD/CAM milled titanium bars is so exceptional that BioCad offers a 15-year warranty against breakage. With each of your cases, you will receive a custom warranty card with your patient’s name, personal identification number, dentist’s name and expiration date of the warranty.

As a clinician, you infuse integrity into your work to ensure satisfaction.

By choosing DTI, you are assured of receiving the same from any of our dental laboratories.

To learn more about our custom milled, CAD/CAM titanium bars, please contact one of our certified BioCad laboratories:
